GRIP

Swing 360° snow rake is a versatile tool designed to clear snow from steps, patios, and pathways. Although designed especially for removing snow, Swing 360° is also useful for other purposes. It can be used for land leveling, foundation work and gardening. It is also convenient for harvesting, especially collecting apples or other fruits from under the trees without breaking them. Dusty premises such as construction sites and animal shelters can be cleaned with a rake without dust rising into the air unlike when brooming. The user-oriented design enables an ergonomic working posture and a good grip on the product. The oval-shaped handle and shaft with grip coating sit firmly in the palm enabling rotation movement without having to squeeze hard.
